APR 2023 – 3.7 GPA

Experience

Web Developer Intern @ FamilySearch
AUG – DEC 2022 / REMOTE

- Developed rich web applications using React in an Agile work environment
- Collaborated with UX designers and web developers including design and code reviews
- Rebuilt Polymer pages in React with additional features focusing on composability and robust, performant, and readable code
- Utilized and improved internal material design framework

React • JavaScript • CSS • Jest • Node.js • Yarn

Projects

Portfolio Site *Visit*

A place to showcase my work and love for web development and design. All projects listed below and more can be found here.

HTML • Sass • JavaScript

iRacing Stat Tracker *WIP*

A lightning-fast, revamped stat viewer for iRacing members to compare their progress, schedule their seasons, and track participation.

React • TypeScript • Sass • Next.js 13 • Turbopack • Node.js • PocketBase • Jest • XD

Circle Tracks *GitHub*

Full stack SPA to explore all of the race tracks that the top three NASCAR national series visit every year.

Angular • Sass • TypeScript • Node.js • MongoDB • Express • XD

Just Pick Something *Visit*

Web app that places a list of choices in a tournament style bracket to help you, your friends, and your family make your next difficult choice easily.

HTML • Sass • JavaScript • XD

Morssenger *GitHub*

A team-built Android app that allows messaging with live input translation to and from Morse code with options for audio or haptic feedback.

Java • Android Studio • Firebase

Simple Trails *Interactive Prototype*

UX design project that included creating detailed personas, scenarios, storyboards, usability studies, and prototypes for an outdoor activity Android app.

Photoshop • XD
